

MOBILE HANDWASH SYSTEM
HYGIENE SAFETY ONBOARD

HOBART MOBILE HANDWASH SYSTEM

Supports your hygiene safety onboard

YOUR REQUIREMENTS

Considering the key times for handwashing, like for preparing food, before eating or after touching surfaces that are frequently touched by other people, it appears that the current availability and capacity of handwash opportunities onboard cruise vessels are not sufficient anymore to follow the official recommendations when to wash the hands and to fulfill the requirements of hygiene protocols.

The following aspects should be considered:

- Handwashing provides better hand hygiene than hand sanitizing.
- Many people have to wash their hands in a very short time.
- Handwashing facilities must be flexible in use and independent of the port.

HAND HYGIENE

The CDC (Centers for Disease Control and Prevention) in their campaign "Life is better with clean hands" promotes handwashing as the best way to remove germs, avoid getting sick, and prevent the spread of germs. Handwashing should always be the preferred option as hand sanitizers are insufficient in some cases. CDC recommends washing hands with soap and water whenever possible, because it reduces the amounts of all types of germs like viruses, bacteria etc. and even chemicals. OUR SOLUTION

HOBART is providing a handwash solution for flexible use onboard or before boarding or re-entering the vessel after shore excursions. As the system is moveable, it can be positioned outside or inside the ship at locations where handwashing is not supported today (e.g. in front of restaurants, theater, casino, shops, etc.).

The system comes with a supply station which is connected with the ship supplies (freshwater, greywater and electricity) and can operate fully independent from the port even located outside of the ship. The supply station, available in various configurations, can serve between one and ten handwash stations which are interconnectable in series and do not need an electrical connection. The units have a reliable heavy-duty design and are equipped with two big casters and handles to provide easy handling by one person.

YOUR BENEFITS

Improved hygiene

Touchless operation

Independent system

Flexibility

Durability

Fast set-up and disassembly

Easy movable

Little storage space
